| Tyrosine – | 4.4% |
| Tryptophan (<i>essential amino acid</i>) - | 0.4% |
| Valine (<i>essential amino acid</i>) – | 1% |

Derived from Argentine Porcine liver, this liver is five times the strength of pure liver and is cooked at over 95 degrees C. for over 12 hours to kill all bacteria if present. It then undergoes stringent veterinary tests in Argentina, Germany and the U.K. authorities en route to us.

Whilst not guaranteed as such, this liver powder is highly nutritious and can often have a protein value in excess of 80%. This product is pharmaceutical grade, and is used in the UK Pharmaceutical industry as well as being used as a human food ingredient in some eastern European countries.
